

## Description

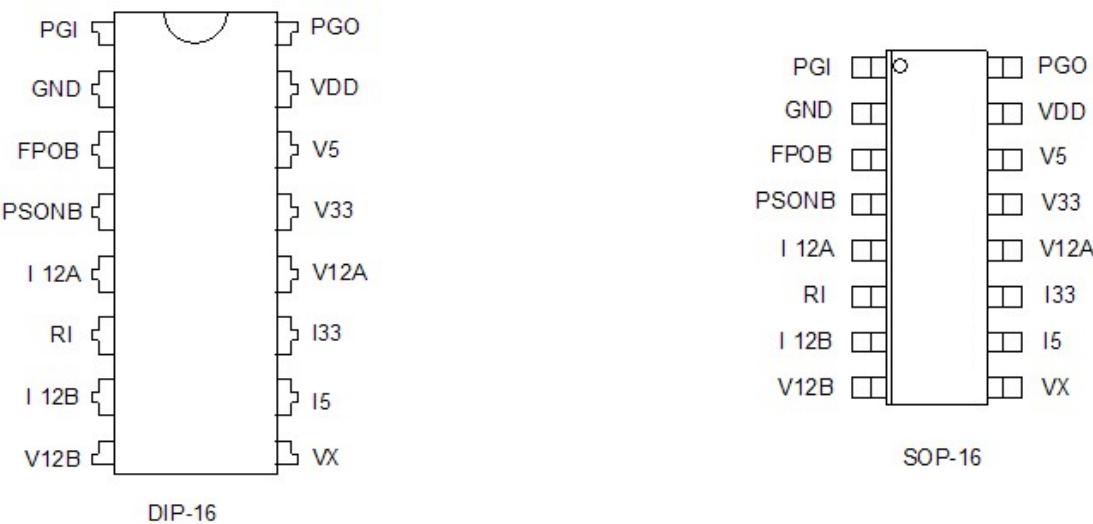

The EST.7627A is a PC switching power supply monitor with minimum external components. It provides protection circuits, power-good output (PGO), fault protection output (FPOB) and on/off control (PSONB). The over-voltage protection (OVP) and under-voltage protection (UVP) monitors V33, V5, V12A and V12B.

The over-current protection (OCP) monitors V33&I33, V5&I5, V12A&I12A and V12B&I12B. The VX pin provides an extra protection function. When an OV, UV, OC or VX condition is detected, the fault protection output (FPOB) is latched high and the power good output (PGO) go low. PSONB from low to high resets the latch. When OV, UV, OC, VX and PGI are all right, the power good output (PGO) will be issue. A built-in 4ms delay and 38ms debounce for PSONB turn off FPOB.

## Features

- Over-voltage protection (OVP) for +3.3V, +5V, +12VA and +12VB supplies
- Under-voltage protection (UVP) for +3.3V, +5V, +12VA and +12VB supplies
- Over-current protection (OCP) for +3.3V, +5V, +12VA and +12VB supplies
- The VX pin provides an extra protection function.
- Fault protection output (FPOB) with open drain output
- Power good output (PGO) with open drain output
- 75ms UVP/OCP/VX delay time
- 300ms PGO delay time
- 38ms PSONB debounce time
- 14us OVP debounce time
- 60us UVP/VX debounce time
- 20ms OCP debounce time
- 73us PGI debounce time
- 4ms FPOB turn off delay time

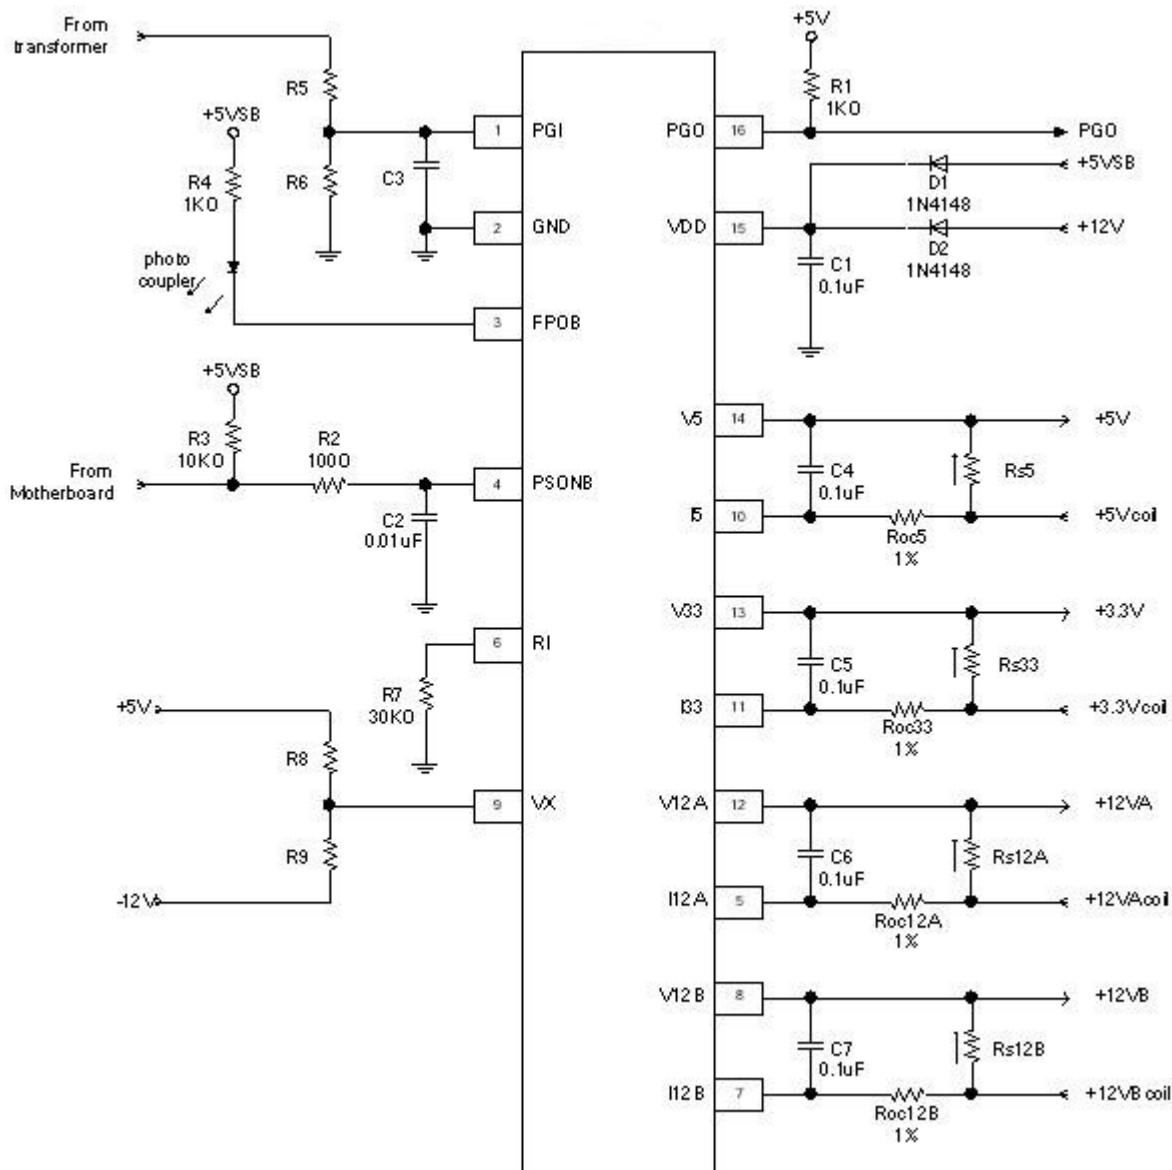

## Pin Configuration (Top View)

## Ordering Information

Order Number	Package Type	Packing	Top Marking	Note
EST.7627A	PDIP-16 (Pb-free)	Tube	EST.7627A	Green Package
EST.7627AS	SOP-16 (Pb-free)	Tube	EST.7627AS	Green Package
EST.7627ASR	SOP-16 (Pb-free)	Tape & Reel	EST.7627AS	Green Package

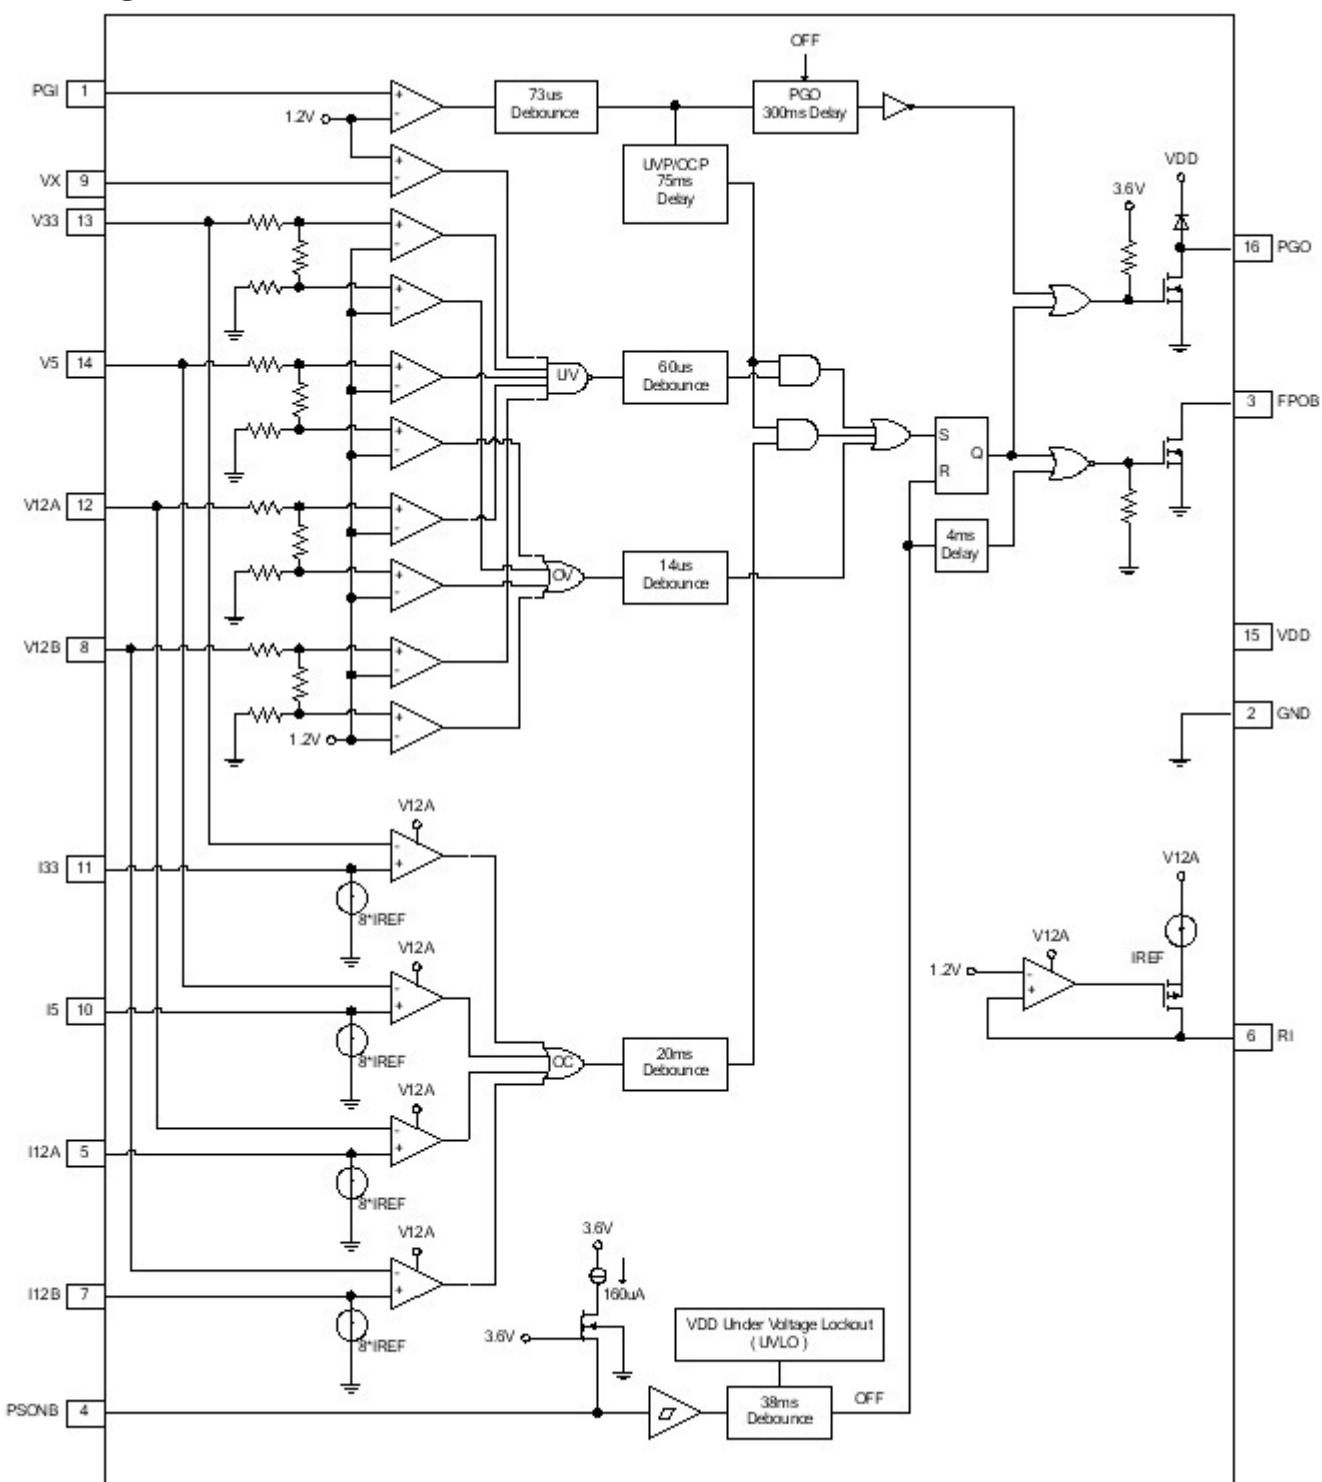

## Typical Application Circuit

## Pin Description

Pin Number	Pin Name	Function
1	PGI	AC power good input pin.
2	GND	Ground.
3	FPOB	Open drain output of the fault protection.
4	PSONB	ON/OFF control input pin.
5	I12A	+12VA over current protection sense input.
6	RI	Current sense adjustment input.
7	I12B	+12VB over current protection sense input.
8	V12B	+12VB input pin for OVP, UVP and OCP.
9	VX	Extra protection sense pin.
10	I5	+5V over current protection sense input.
11	I33	+3.3V over current protection sense input.
12	V12A	+12VA input pin for OVP, UVP and OCP.
13	V33	+3.3V input pin for OVP, UVP and OCP.
14	V5	+5V input pin for OVP, UVP and OCP.
15	VDD	Power supply.
16	PGO	Open drain output of power good signal.

## Block Diagram

**Absolute Maximum Ratings**

Stresses above those listed here may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Parameter	Symbol	Min.	Max.	Units
Supply Voltage	V <sub>DD</sub> ,V12A	-0.3	16	V
Supply Voltage Rising Time	V <sub>DD</sub>	1	-	ms
	PGI,PSONB,V5,V33,VX	-0.3	7	V
	V12B	-0.3	16	V
Input Voltage	I5,I33,RI	-0.3	V12A + 0.3 (Max. 16V)	V
	I12A,I12B	-0.3	V12A + 0.6 (Max. 16V)	V
Output Voltage	FPOB	-0.3	16	V
	PGO	-0.3	V <sub>DD</sub> + 0.3 (Max. 16V)	V
Operating Temperature Range		-40	85	°C
Storage Temperature Range		-65	150	°C
Soldering Temperature		-	260	°C

**Electrical Characteristics** (T<sub>A</sub>=25°C, V<sub>DD</sub> = 5V, unless otherwise noted.)

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Units
<b>VDD Power Supply</b>

**Application Hints**

Over Current Protection ( OCP )

The Over-Current Protection ( OCP ) monitors V33&I33, V5&I5, V12A&I12A and V12B&I12B. When an over-current condition appears more than 20ms, the FPOB output goes high latch. Also, this fault condition will be latched until PSONB is toggled from low to high or VDD is removed.

The resistor of RI pin connected to ground will provide a precise current IREF for the OCP operation. The input offset voltage \$V\_{os}\$ of OCP comparators are typical 0mV. We suggest that the OCP sense voltage \$Vs\$ is large than 100mV. And the capacitor C is used to avoide power on fail or dynamic load fail. We suggest \$C > 0.1\mu F\$.

As shown in above, the over current of IL is determined by \$Rs\$, \$Roc\$ and \$Ioc\$.

$$I_{REF} = \frac{V(RI)}{R(RI)} \quad \dots\dots\dots(1)$$

$$\begin{aligned} I_{L\_ocp} \times R_S &= (I_{oc} \times R_{oc}) + V_{os} \\ \Rightarrow R_{oc} &= \frac{[(I_{L\_ocp} \times R_S) - V_{os}]}{8 \times I_{REF}} \quad \dots\dots\dots(2) \end{aligned}$$

Following is an example on calculating \$Roc\$.

Let \$I\_{L\\_OCP}=20A\$, \$R\_S=5m\Omega\$, \$V(RI)=1.2V\$, \$R(RI)=30K\Omega\$, \$V\_{os}=0mv\$

$$\begin{aligned} I_{REF} &= \frac{V(RI)}{R(RI)} = \frac{1.2}{30K\Omega} = 40\mu A \\ R_{oc} &= \frac{[(I_{L\_ocp} \times R_S) - V_{os}]}{8 \times I_{REF}} = \frac{20A \times 5m\Omega - 0mv}{8 \times 40\mu A} = 312.5\Omega \end{aligned}$$

The tolerance of parameter K, \$V(RI)\$, \$R(RI)\$, \$Roc\$ and \$Rs\$ would be proportioned to the tolerance of OCP current.

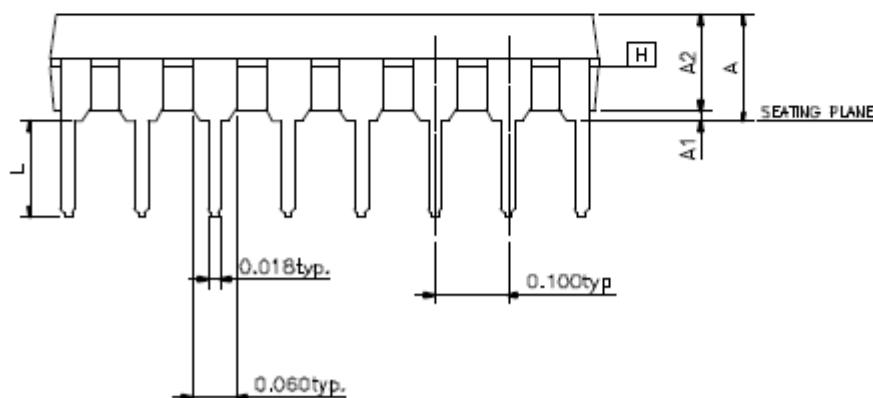

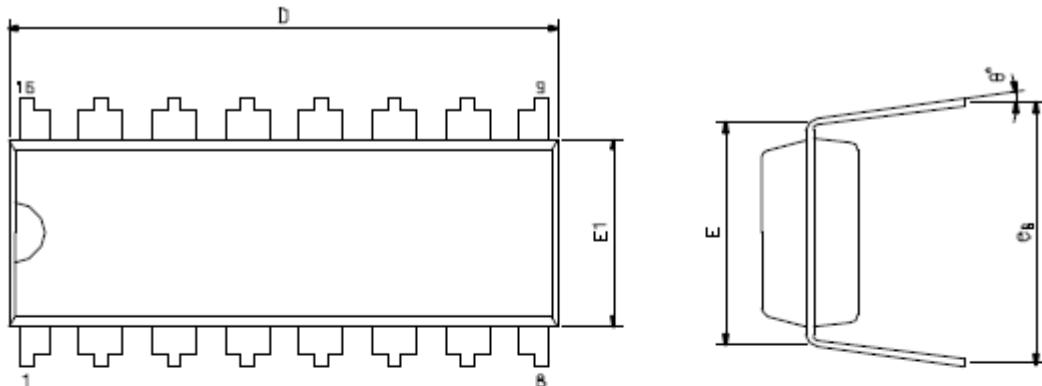

The ratio of  $\frac{V_{os}}{(I_{L\_ocp} \times R_S)}$  would be proportioned to the tolerance of OCP current.

Let \$V\_{os}=\pm 3mv\$, \$I\_{L\\_OCP}=20A\$, \$R\_S=5m\Omega\$, then the tolerance of OCP current is \$\pm 3mv / 100mv = \pm 3\%\$
